# Milk Without Mystery **Perfectly Pure**

No need to wonder what germs exist in it. There are no germs at all. The cows are inspected—so are the milkmen. The dairies are clean—the milk is sterilized. You know that Van Camp's is safe.

All that you know of your milkman's milk is against it. And you are happy in not knowing all.

configurations.

Here are the facts about Van Camp's Milk-all of the facts there are.

Judge if knowledge isn't better than mystery, when it comes to a food like this. Then judge the milk itself.

Use Van Camp's once in your cooking -serve it once on your table. Learn what it means to have a cow in your

Then go back, if you can, to raw milk.

#### It's Whole Milk

Van Camp's is whole milk-and you never get that from your milkman.

Milk from the top of your milkman's can has an excess of butter fat, for the butter fat rises. Milk from below the top has an excess of solids, for the solids fall. And it lacks the butter fat.

Thus, the milk from your milkman is never twice alike,

Van Camp's is always the same-always the whole, rich milk. All of the butter fat, all of the solids are in it.

That is the reason for the superlative flavor which Van Camp's gives to a milk dish. Not because of anything added. There is no artificial flavor. You simply get the richness that belongs to milk.

Use Van Camp's once in your cooking. Learn the flavor that it gives to a milk dish. Then decide for yourself if you want to go back to raw milk.

Please remember this fact. Van Camp's is not like condensed milk, which is half sugar-a milk that you can't use

We take the richest of milk, fresh from the cow, and evaporate part of the water. Then we seal it and sterilize it, so it comes to you just as fresh as it was on the day we milked it.

That is all. We add no sugar, no starch, no preservative. Nothing whatever is altered.

Analysis shows about 30 per cent of solids, of which 8 per cent is butter fat.

# A Germless Milk

In five states, every day, we milk 20,-

Each of these cows is inspected. So are the men who milk them. No tubercular cows-no diseased milkmen-convey their infections to Van Camp's Milk.

Our dairies are sanitary. Cleanliness everywhere is carried to the extreme. Our buildings, where the milk is evap-

orated, are built without wood.

Then the milk is sterilized after the can is sealed. This makes it certain that not a germ can exist in it.

Science guards every step.

Not so with your milkman's milk. In every drop there are myriads of germs, and you never know what germs they

In Washington, D. C., it was recently found that 11 per cent of the dealers sold tubercular milk-milk with Consumption in it. Milk that caused guinea pigs to die of tuberculosis when they were fed

Yet that is but one of the risks. Is it not folly to take them when they can be wholly avoided?

This richest of milk costs you less than a half milk-less than a milk that's impure. And it can be always on hand.

# For Children

Two-thirds the mortality of children is due to the germs in milk.

Van Camp's avoids those dangers. Raw milk is just as unfit as raw meat.

It carries more danger of germ infection. Give your children milk that is safe.

They will like Van Camp's better than raw milk. For that slight almond flavor, due to sterilization, is itself a delicious taste. And the fact that Van Camp's is not germ-laden makes it seem doubly
